# Chicken Life Cycle

RETOLD BY \_\_\_\_\_

A chick is covered in fluffy feathers. It starts to eat. Soon it has adult feathers. As long, it will be an adult chicken.

In the shell, the chick waits. When the shell cracks open, out pops a baby chick.

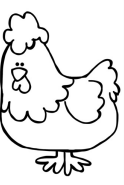

After that, the baby grows and grows by getting food from the yolk.

The baby begins to move to the side of the egg. It starts out with a small spot on the egg yolk.
