FAMILY

ANIMAL GROUP

HABITAT

Moose are part of the deer family. Other members in this family are elk, reindeer, and caribou. Moose are the biggest member in this family.

Moose are members of the mammal group. They are warm-blooded, born alive, are covered in fur, have a backbone, and drink their mother's milk.

Moose live in forest areas where there is snow cover. They live near lakes, bogs, swamps, streams, and ponds.

BODY

HOOVES

DIET

Moose are easy to find with their long, rounded snouts, flattened antlers, humped backs, thin legs and huge bodies. They have a short tail.

They have large hooves. They use their hooves to clear areas to find food, and as snowshoes. Their hooves allow them to walk on the snow.

Moose are herbivores. In the summer food is easier to find. They eat catkins, tall grasses, leaves, and water lilies. In the winter, they eat mostly woody plants and bushes.

BABIES

FUN FACTS

GLOSSARY

Moose usually have one baby, sometimes two at a time. The baby weighs 25-34 lbs. at birth. Baby moose, or calves, grow up very quickly. They live with their

- Moose are excellent swimmers.
- They can run up to 35 miles per hour.
- Moose can dive under water to search for food.
- The skin that dangles from a moose's chin is called a bell.

antlers: horns on the head of a moose made of bone
bell: a flap of skin hanging under the chin.
bull: a male moose
calves: a moose baby
cow: a female moose
herbivore: an animal that only eats plants
hooves: a covering that protects the bottom of a moose's feet
mammal: a warm-blooded animal that has fur or hair
